VxRail For Hybrid Cloud and More

7. April 2020

Christian Stein,
Adv. PSE, Global Distribution Group
Christian.stein@dell.com

VxRail By the Numbers

Fastest Growing HCI System¹

7000+
Customers

\$2B Annual
Revenue

132% Growth
Rate

79K+ Nodes

1. For Q4 2019 year-over-year among TOP 10 product brands.

HCI Trends in 2019 – continue 2020

Data center modernization

Continues to simplify and transform IT operations

Edge computing growth

More AI, ML and IOT driving compute at edge locations

Hybrid cloud acceleration

Delivers consistent infrastructure and operations

Cloud-native adoption driver

HCI will power cloud native and container adoption

CONTINUED INNOVATION

New consumption models | New data services | AI / ML for self-diagnosis
Next-gen processors | NVMe | 5G | 100GbE | Enhanced serviceability

Dell EMC VxRail

The fastest & simplest path to IT outcomes in VMware environments

DELL EMC

Dell Technologies Cloud on VxRail with VCF

Customers Want Multiple Clouds

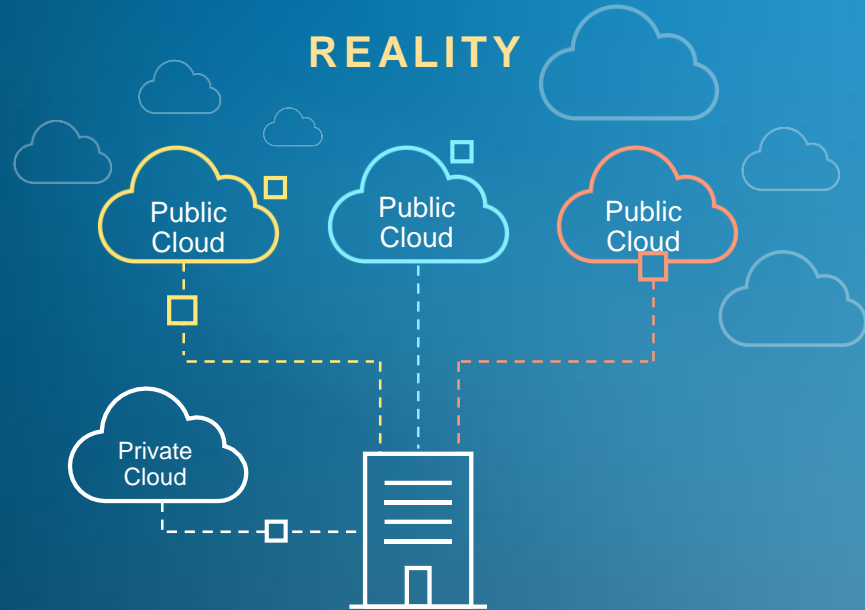

93%¹

of customers will deploy workloads across two or more clouds¹

EXPECTATION

REALITY

Leading to Operational Silos without the possibility of moving workloads between these silos

¹ IDC White Paper, sponsored by Cisco, Adopting Multicloud — A Fact-Based Blueprint for Reducing Enterprise Business Risks, June 2018.

The future is multi-cloud

Competition drives innovation and the creation of new services

VxRail Deployment Options

- **Cluster deployment type**

- Standard VxRail cluster
- VVD
- VCF
- Dell Technologies Datacenter-as-a-Service
- **2-node vSAN cluster**
- Stretched cluster

- **2-node Deployment**

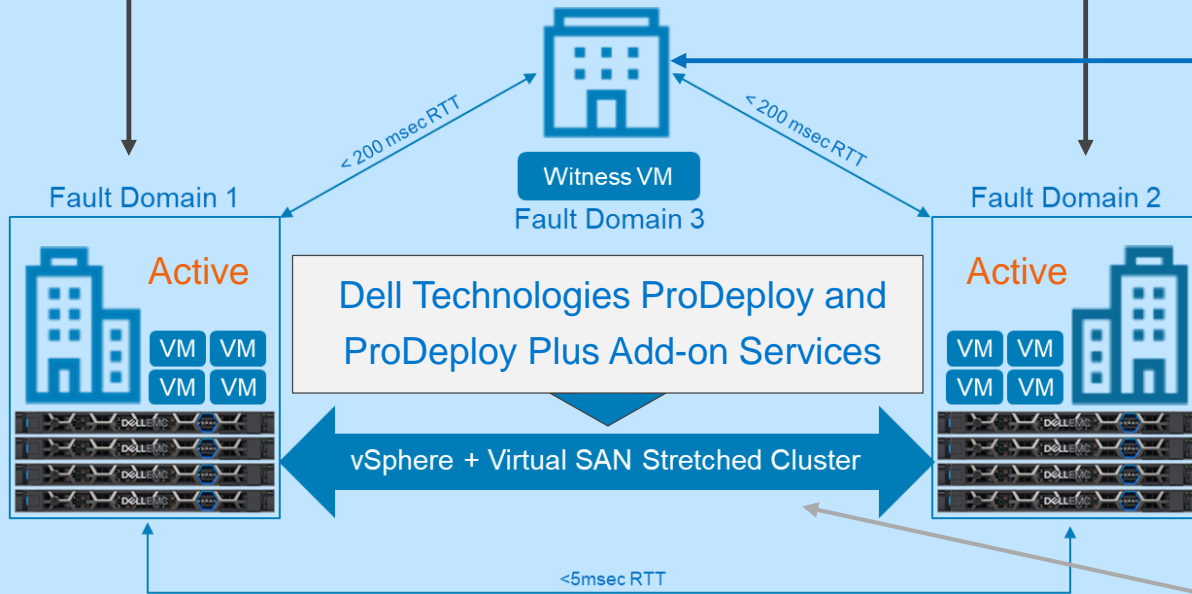

- Leverage customers' *existing* VMware infrastructure for witness
 - No automated install of witness
 - Witness status monitoring
 - Healthy, disconnected, maintenance mode, shutdown)
- Direct connect or switched
 - Nodes connected with cross-over cables
 - 10/25GbE switch required for switched

VxRail Stretched Cluster

Elements of a stretched cluster

All virtualization hosts are part of the same logical cluster but housed in separate locations in an active/active configuration.

Latency = RTT (Round Trip Time)

A witness host housed in a third location coordinates data placement between sites and assists in the failover process in the event of a failure.

The vSAN Stretched Cluster feature ensures an entire site failure can be tolerated with no data loss and near zero downtime.

Configuration parameters of a stretched cluster

- *Preferred or Primary site* – one of the two data sites that is configured as a vSAN fault domain.
- *Secondary site* – one of the two data sites that is configured as a vSAN fault domain.
- *Witness host* – a dedicated ESXi host or vSAN witness appliance that is host to the witness component which coordinates data placement between the preferred and secondary site. It also helps with the failover process. This is the third fault domain.

The vSAN storage policies that impact the VxRail Cluster configuration are:

- *Primary Failures to Tolerate (PFTT)/Failures to Tolerate (FTT)* – for stretched clusters this rule has two possible values: 0 ensures protection on a single site; 1 enables protection across sites.
- *Secondary Failures to Tolerate (SFTT)* – This term is used in vSAN 6.6/VxRail 4.5.070 or later. The rule that defines the number of host and device failures that a virtual machine object can tolerate in the local site. Possible values: 0,1,2,3.
- *Failure Tolerance Method*- either RAID-1 (mirroring) used when performance is important or starting with vSAN 6.6/VxRail 4.5.070, RAID-5/6 (erase coding) used when capacity is important. For stretched clusters, this policy only applies to the SFTT setting. This failure tolerance method is the local file protection mode.
- *Affinity (only applicable starting with vSAN 6.6/VxRail 4.5.070)* - this policy is applicable when PFTT is set to 0. It is set to preferred or secondary to determine which site stores the vSAN object.

VxRail: Automated Life-Cycle Management

Unlock
Innovation

RAPID PATCHING AND UPDATING

Automated patching to keep pace with innovation
Single click update entry to full stack updates
Upgrade time estimates enable better business alignment

VxRail for HPC and AI in the Core

Expand Workload Possibilities

Unlock innovation and modernize the data center

Expanding Platforms for Business-Critical Workloads

New VxRail P580N model

- Features four-socket PowerEdge server platform with 2nd Generation Intel® Xeon® Scalable Processors delivering 2x the memory per system*
- Ideal for in-memory intensive database applications including SAP HANA workloads, offering 25% potential processing enhancement over VSA based solutions
- First performance optimized P series 2U platform with all NVMe

*Up to 6144GB RAM

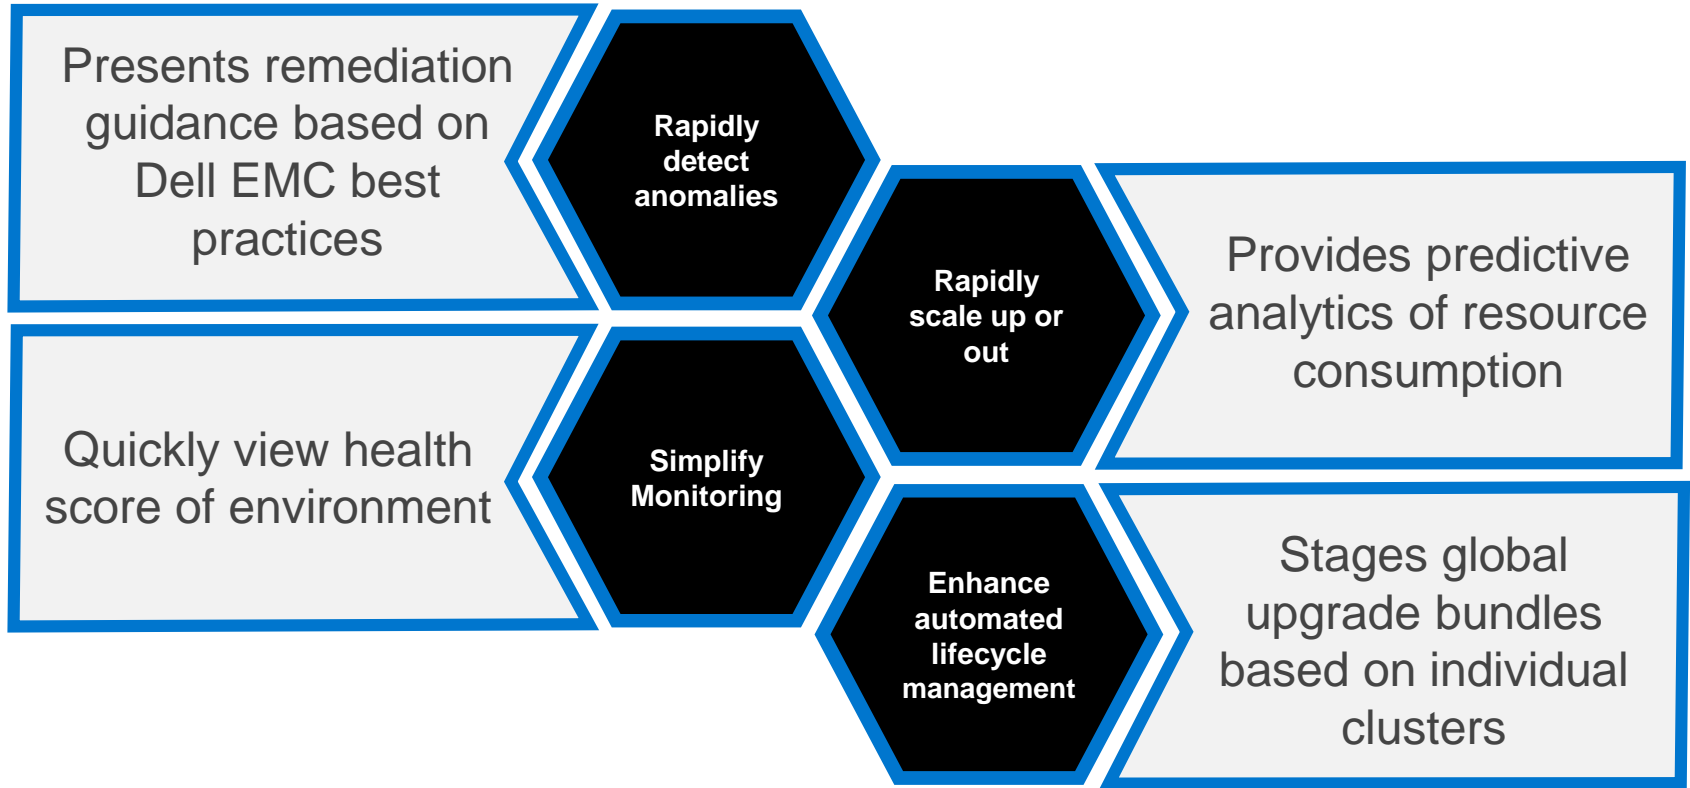

High Performance Cost Effective Platforms

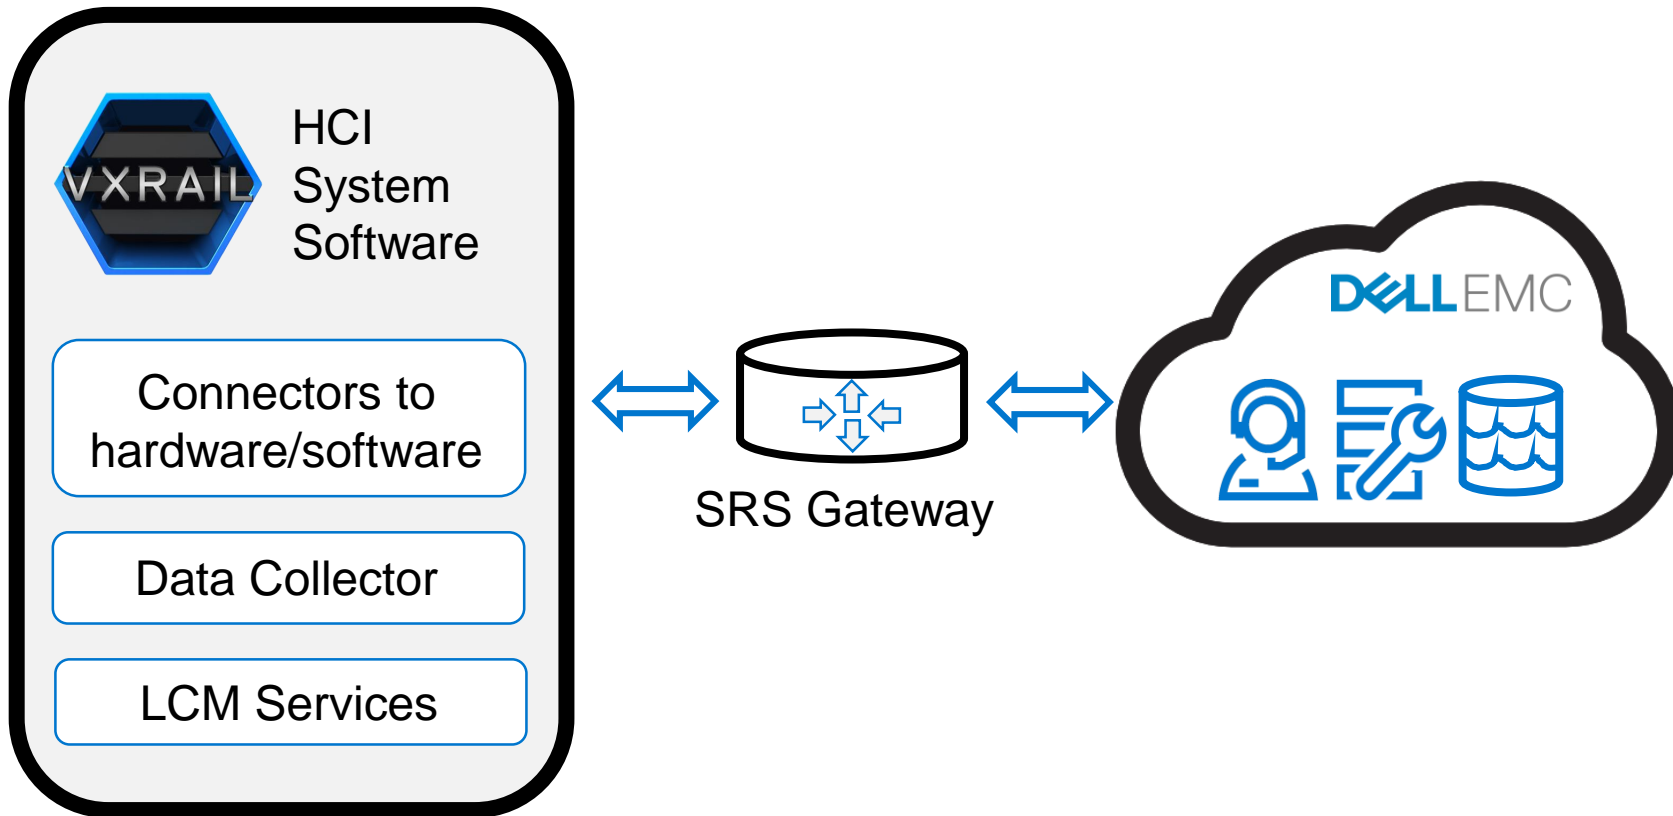

- New! E560N designed to run complex workloads including data warehouses, ecommerce, databases, and high-performance computing (HPC)
- New! NVIDIA T4 GPUs in E series platforms, for deep learning, AI/ML, data inferencing and of course VDI workloads.
- Addition of 7.68TB value SSD, doubles the capacity of all flash platforms

Simplified Operations with VxRail ACE

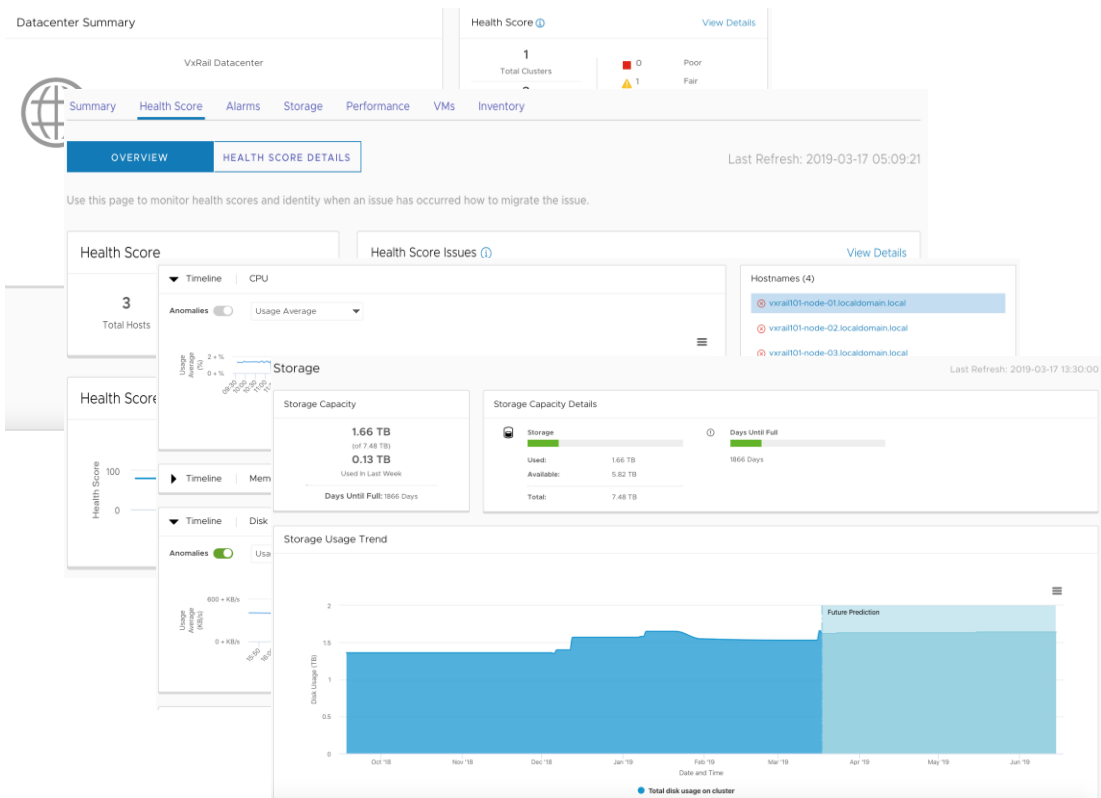

ACE Connectivity

ACE Functionality

- Global visualization
- Simplified health score
- Advanced metric charting
- Capacity planning

DELL EMC VXRAIL PARTNER FASTPASS

What is the VxRail FastPass? The VxRail FastPass is a collection of the most useful VxRail marketing assets, demos and sales tools

Looking for additional content? Check out the [VxRail Knowledge Center](#) to search for all Dell EMC collateral

How do I use it? Links vary depending on confidentiality:

- Public: DellEMC.com
- Partner: Internal and channel partner viewable

How do I know what's changed?

The FastPass is updated quarterly. Changes from the last edition are highlighted in yellow with a short explanation in bold red.

Who do I contact if I have questions?

Please report all broken links, comments or questions to: [Jeremy Goulder](#).
